**Packers Foundation awards grant to build  
environmental education station at college**

The Green Bay Packers Foundation awarded \$5,000 to develop a hands-on educational area for students to engage in sustainable learning on Gateway Technical College's Kenosha Campus.

The donation will be made to the Gateway Technical College Foundation for the project to be built at the college's Center for Sustainable Living.

The grant will pay for a permanent, handicap-accessible potting station and planting table for visitors to plant seeds and seedlings. A permanent composting area will be part of the station as well, providing interactive education about composting, planting and other environmental concepts.

"We appreciate the Green Bay Packers Foundation for their contribution to helping Gateway teach the children of today — and the leaders of tomorrow — sustainable practices in a very hands-on and practical way," said Stephanie Sklba, Gateway Technical College vice president, Community and Government Relations.

"The project at our Center for Sustainable Living will impact students from all of Gateway's communities."

Center program manager Kallie Johnson said while she's been able to offer some composting activities for visiting students, a permanent one was really needed to provide that full hands-on experience needed for these concepts.

"Every time a group comes to the Center, I want them to be able to take something home that is useful and educational," said Johnson. "This potting station is perfect."

Johnson said the project is expected to be installed and ready for use by April.

Gateway Technical College's mission is to deliver industry-focused education that is flexible, accessible and affordable for our diverse community. The college collaborates with communities in Kenosha, Racine and Walworth counties to ensure economic growth and viability by providing education, training, leadership and technological resources to meet the changing needs of students, employers and communities.
